The Science of Bio-Correct Light

What is Indoor Sunshine® Full Color Spectrum™ Light?

Our Full Color Spectrum light creates the colors (wavelengths) of natural sunshine that our bodies use to be calm and awake. The sun is 100 CRI (Color Rendering Index) 5500 K (Kelvin). Indoor Sunshine is 95 CRI 5500 K. Sunshine

itself was the blueprint for Indoor Sunshine. People, plants and animals love it!.

Research shows that our bodies need full spectrum light that supports our immune system, visual acuity, concentration, alertness, and is appropriate for those with sleep disorders, PTSD, autism, PMS, SAD (Seasonal Affective Disorder), and depression.*

Why Is Indoor Sunshine Light Better?

We don't cut corners. Your new Indoor Sunshine lights contain a proprietary blend of phosphors and rare earth minerals. Our lights produce a true, full, balanced, rainbow spectrum that is the closest match to natural sunlight available.

One Indoor Sunshine bulb can outlast 13 incandescent bulbs with energy savings up to \$120 per bulb!

"I highly recommend Indoor Sunshine. We appreciate the pleasant calmness, improved concentration, and better vision."

~ Todd Ovokaitys, MD
